CURRENT PRACTICE DESCRIPTION:

PAIN MANAGEMENT / SPORTS MEDICINE / MANIPULATIVE THERAPY

-My practice is a mix of all phases of acute, chronic, malignant, and non-malignant pain management. Patients are seen in the setting of my private out-patient practice, which takes a primary approach to pain management. I receive early treatment referrals from primary care physicians, as well as end stage referrals from Neurosurgeons, Orthopedists and Anesthesiology pain management programs. My approach uses my Internal Medicine residency training combined with broader view Osteopathic considerations of other systemic disease states and sequelae, as well as manipulation and medication for painful musculoskeletal conditions. These conditions are often outside the field of view of radiographic and other diagnostic studies, as well as the scope of subspecialty interventional options.
